

Table showing rice cultivation schedules for various varieties (夢つくし, 元気つくし, ヒノヒカリ, ツクシホマレ) from May to November, including stages like seedling, tillering, and harvest.

収穫 収穫適期は、7割程度の籾が黄化し、穂首に近い籾はわずかに緑が残っている時期。
水管理 収穫1週間前までは、間断かん水又は飽水管理を続ける。
早い時期の落水は、登熟不良・品質低下を招く。
台風襲来時は、茎葉からの蒸散が大きいため、深水とする。

病虫害防除 (Disease and Pest Control) section containing sub-sections for seed disinfection, box treatments, liquid treatments, granular treatments, and a detailed pest/disease list.

土づくり (Soil Preparation) section discussing the use of household urine, lime, and soil improvement materials.

除草 (Weeding) section including a table of weeding agents, their application periods, and usage instructions.

施肥 (Fertilization) section containing a table of fertilizer components and application rates for different rice varieties.

基肥が側条施肥の場合 (When basal fertilizer is applied in rows) section providing instructions on fertilizer application.

基肥一回全量施肥(一発肥料)の場合 (When applying all basal fertilizer at once) section containing a table of fertilizer components.

中後期除草剤 (Mid-late weeding agents) section containing a table of weeding agents and their application periods.

水稲管理日誌を必ず記帳しましょう。肥料・農薬の注文はJAへ!! (Please definitely record the rice management diary. Order fertilizers and pesticides from JA!!)
